

# Paws and Possibilities™

Teaching you to train your dog, one paw at a time

## How To Effectively Use The Ecollar

You are using a top of the line product when it comes to remote training with your dog. As you can see in the owner's manual for the Ecollar Technologies 300TS collar, there are a lot of ways this collar can be used. In this write up, I have described the settings that Paws and Possibilities recommends for the most efficient training of your dog.

### **There are 3 programmable modes on this collar.**

Yours is set on Continuous Mode- What that means is that when you push the button down, your dog will feel the sensation of the stimulation for as long as you hold the button down. There is a letter "C" displayed in the LCD screen of the transmitter.

The black button labeled "S" is the main button you will push. It will send a stimulation to the receiver for whatever level your collar is set on (the number shown on the LCD screen).

The red button labeled "S" is the booster and will deliver a stimulation level higher than the main button. The collar comes with the default booster set to stimulate 20 levels higher than what it is set on. We often find 20 levels is too high for the purposes of which we need and we can manually set the booster to be whatever number higher will work best for your dog. There are directions in the manual (that we have highlighted) indicating how to change this number. Please do not change the booster level with the collar on your dog.

The black button labeled "T" is for Tapping and causes the collar to vibrate when it is pressed. There will only be certain circumstances where we will recommend you use this feature.

# Paws and Possibilities™

Teaching you to train your dog, one paw at a time

A feature of this collar that often comes in handy when you are outside with your dog at night is the light. You can push the on/off button on the back of the transmitter and turn on a light on the receiver. It will cycle through strobe, continuous, and off depending on how many times you push the button.

You are using a top of the line product when it comes to remote training with your dogs. As you can see in the owner's manual for the Ecollar Technologies 302TS collar, there are a lot of ways this collar can be used. In this write up, I have described the settings that Paws and Possibilities recommends for the most efficient training of your dog.

*The LCD Display is critical on a 2 dog unit to give you the information you need to know. Below is a copy of the user's manual. Familiarize yourself with the bulleted sections describing "In 1D mode..." and "In 2D mode..."*

## THE LCD DISPLAY FEATURES

Press down on the Stimulation Level Knob or press any button to wake up the LCD display. Please note that if the collar receiver is on, pressing the stimulation buttons and/or the mode button will trigger the collar receiver.

Displays the Stimulation Level : "0" means no stimulation and "HI" means the highest level(100)

Indicates current stimulation type is momentary or continuous stimulation. "M" and "C" icons will be toggled when Momentary/Continuous Button is pressed.

- In 1D mode, the 1D icon will blink indicating the stimulation is ready to be changed. If the 1D icon is solid, it has been locked into a specific stimulation level as displayed on the LCD. Release the stimulation lock by clicking down on the rotary dial until the 1D icon begins to blink; now you can change the stimulation to a new level. The new selected level can be locked by clicking down on the rotary dial until the 1D icon stops blinking. In 1D mode, the 2D icon will not be displayed unless dog 2 stimulation is locked
- In 2D mode, the 2D icon will blink when the stimulation is ready to be changed. If the 2D icon is solid, it has been locked into a specific stimulation level as displayed on the LCD. Release the stimulation lock by clicking down on the rotary dial until the 2D icon begins to blink; now you can change the stimulation to a new level. The new selected level can be locked by clicking down on the rotary dial until the 2D icon stops blinking. In 2D mode, the 1D icon will not be displayed.

- In Tapping Sensation mode, the LCD displays "T" as shown in the right picture and you cannot change the stimulation level.

# Paws and Possibilities™

Teaching you to train your dog, one paw at a time

Yours collar is set on **Continuous Mode**. What that means is that when you push the button down, your dog will feel the sensation of the stimulation for as long as you hold the button down.

There is a letter “C” displayed in the LCD screen of the transmitter. The areas highlighted in yellow below apply to the set up we are using with your collar. As you will see, the S (1D black button) will stimulate dog 1 continuously when the display has 1D and a stimulation number on it. The S (2D red button) will stimulate dog 2 continuously when the display has 2D and a stimulation number on it. If the Tapping sensation symbol is on the display, either dog will receive the vibrating sensation when you push their perspective button.

Two Programmable Modes are provided based on the status of M/C button when Mode button(M) is in 1D or 2D state. Two Stimulation buttons will be working differently.

*The very bottom explains clearly in the graphic how to cycle through the different modes you'll need to use.*

Mode(M) Button	Stimulation (1D or 2D)		Tapping Sensation
M/C Button	Momentary Mode	Continuous Mode	N/A
Display	<b>M</b>	<b>C</b>	<b>TS</b>
S (1D/Black)	1Dog Momentary	1Dog Continuous	1Dog TS
S(1D/Black)+Mode	1Dog Momentary Booster	1Dog Continuous Booster	N/A
S (2D/Red)	2Dog Momentary	2Dog Continuous	2Dog TS
S(2D/Red)+Mode	2Dog Momentary Booster	2Dog Continuous Booster	N/A
L	1D Mode : 1Dog Light 2D Mode : 2Dog Light		N/A

#### Mode Button “M”

- Mode Button allows the user to change modes, cycling between 1D Mode to Tapping Sensation Mode, Tapping Sensation Mode to 2D Mode, 2D Mode to Tapping Sensation Mode, and Tapping Sensation mode to 1D Mode as shown in the diagram.

# Paws and Possibilities™

Teaching you to train your dog, one paw at a time

You will need to confirm that your trainer has changed the booster level so please check with her if you are not clear about this. If you ever need to change it yourself, these directions clearly explain the steps you'll need to take.

In order to use the booster function on your 2 dog collar, you will need to press either:

- the top black S button (dog 1) and the Mode button on the back simultaneously.
- the bottom red S button (dog 2) and the Mode button on the back simultaneously.

## BUTTON FUNCTIONS

### How to Change Boosting Level

- 302TS provides Boosting Stimulation Function for the emergencies.
- Default boosting level is 20, it can be easily changed by following the procedure given below.

#### \* Dog 1

1. Change the mode to Momentary Mode. (Press M/C button until "M" is displayed).
2. Change the intensity level to "0"
3. Press S(1D/Black) button for more than 5 sec to enter into Booster Level Change Mode for Dog 1. The intensity level "0" will start to blink.
4. Rotate the dial to change the boosted level. (The range of available levels is from 1 to 60) Use 1 to 20 for small breeds and 20 to 40 larger more stubborn breeds.
5. Press S(1D/Black) button again to save the new level and exit from Booster Level Change Mode.
6. If no button is pressed or 20 seconds passes, Booster Level Change Mode will be cancelled.

#### \* Dog 2

1. Change the mode to Momentary Mode. (Press M/C button until "M" is displayed)
2. Change the intensity level to "0"
3. Press S(2D/Red) button for more than 5 sec and enter into the Booster Level Change Mode for Dog 2. The intensity level "0" will start to blink.
4. Rotate the dial to change the boosted level. (The range of available level is from 1 to 60) Use 1 to 20 for small breeds and 20 to 40 larger more stubborn breeds.
5. Press S(2D/Red) button again to save new level and exit from Booster Level Change Mode.
6. If no button is pressed or 20 seconds passes, Booster Level Change Mode will be cancelled.
